CHAPTER 1: PRODUCT INTRODUCTION

Overview

Camera

Cable

Hardware Installation

No.	Name
1	Mounting Screws
2	Wall Mount Bracket (ACB-02) W1 Kit
3	Expansion Bolts
4	Mounting Screws
5	Wall or Ceiling Surface
6	Installation Sticker

Description: The mounting surface for the bracket installation needs to withstand at least three times the total weight of the bracket and IP camera.

1. Use the 4 flat head screws to fix the metal adapter plate to the wall mount bracket.
2. Put the installation sticker on the surface (wall or ceiling) of where it will be installed.
3. Take out the screws on the bracket and put them into the expansion bolts to fix the bracket on the surface (wall or ceiling).
4. Remove the base of the camera. Use screws to fix the base onto the bracket.
5. Fix the camera back to the base secured on the bracket.

6. Adjust the direction of the camera to the desired field of view.

7. Put desiccant and stick it on the internal black plastic base.

8. Put the cover back and use a hex key wrench to secure the 3 screws. Make sure all the parts of the camera are installed securely.

CHAPTER 2: CAMERA CONFIGURATION

Web Browser

1. Locate and open one of the web browsers (such as Internet Explorer, Chrome, Firefox, etc.) shortcut on the desktop.
2. In the address bar, type 192.168.0.250 (default IP address of the camera) and then press the **Enter** button.
3. You will be prompted with a pop-up window asking for login information, type in "**Admin**" (default login name) and "**1234**" (default password)

5. If no video is displayed on the screen, please make sure you have VLC Media Player installed on the computer. If not, please download and install

Note: It is recommended to use Chrome internet browser to get the optimized view.

Takes a image snapshot from the camera, you will be prompted to store the image file onto the computer's hard drive.

Start/Stop

Press to stop the live video, press again to restart.

Viewer

Views the live video of the camera.

Setup

Options for configuring the IP camera.

Motorized Lens

Zoom Control

Buttons used to control zooming function.

Button	Description
	Returns the camera back to default position.

Zoom Position

Adjusts the camera's zoom level. Move the zoom slider bar left or right to adjust the zoom level. The value of the zoom position will be reflected in the text field. However, the zoom position cannot be manually entered in the text field.

Focus Control

Adjusts the camera's focus. To adjust the focus automatically, press the  button. To set the focus manually, press the  to focus far objects, and  to focus near objects. The focus can also be adjusted through the slider bar.

Micro Focus Control

Adjusts the camera's focus when the focus in Focus Control is not enough. Move the zoom slider bar left or right to adjust the focus level.

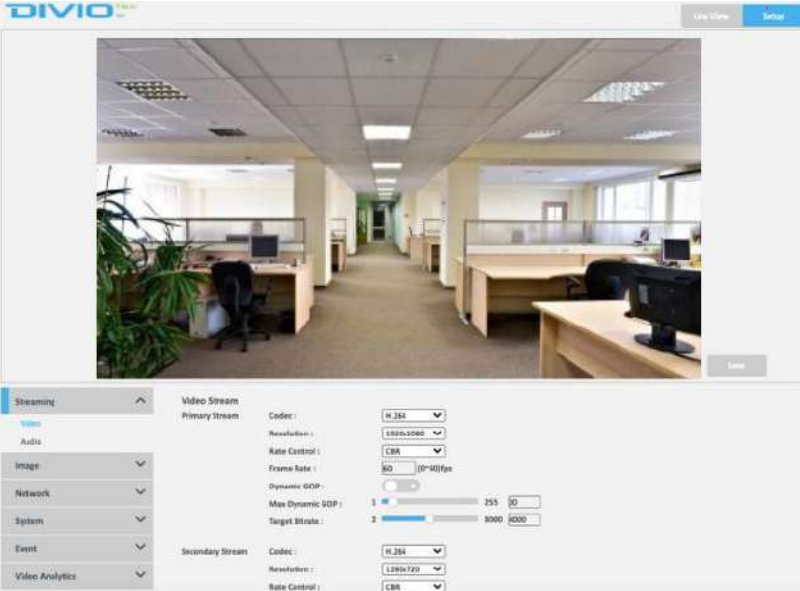

Note: It is recommended to adjust the camera back to the default position before adjusting the Zoom Position, Focus Control, and Micro Focus Control.

Configuring the Camera's Setting

1. To configure the camera's setting, click on the **Setup** button on the main

Setup

The screenshot displays the DIVIO camera configuration interface. At the top, there is a 'Live View' button and a 'Setup' button. The main area shows a live video feed of an office interior. Below the video feed, there is a 'Streaming' section with a dropdown menu for 'Video Stream'. The 'Primary Stream' settings are as follows:

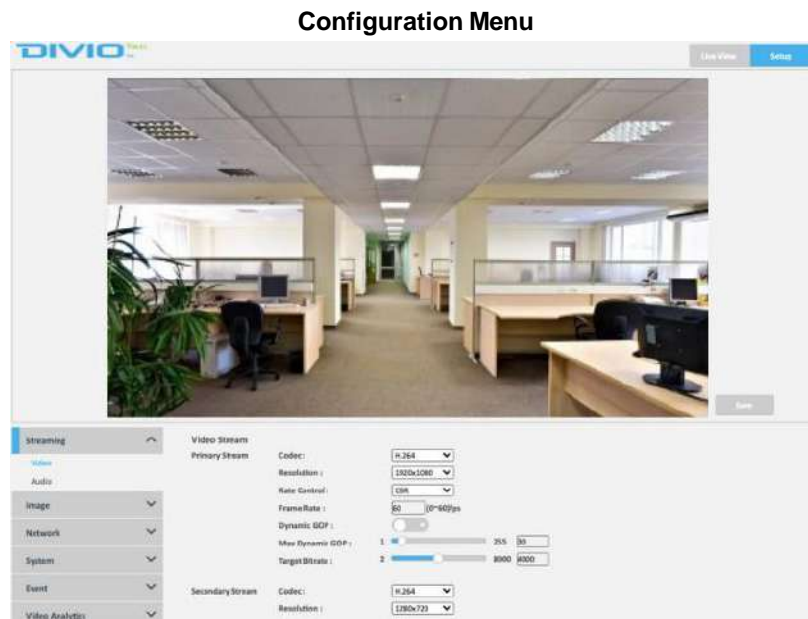

- Codec: H.264
- Resolution: 1920x1080
- Rate Control: CBR
- Frame Rate: 30 (30-60fps)
- Dynamic GOP:
- Max Dynamic GOP: 1 (slider from 1 to 255) 10
- Target Bitrate: 2 (slider from 8000 to 4000) 8000

The 'Secondary Stream' settings are as follows:

- Codec: H.264
- Resolution: 1280x720
- Rate Control: CBR

Browsing Through the Configuration Menu

The layout of the configuration menu is split into two sections. All the camera settings are located on the left hand side of the interface, clicking

Video - Video Configuration

The screenshot shows the DIVIO camera configuration interface. At the top, there is a live video feed of an office interior. Below the feed, the settings are organized into two sections: Primary Stream and Secondary Stream.

Primary Stream Settings:

- Codec: H.264
- Resolution: 1920x1080
- Rate Control: CBR
- Frame Rate: 60 (0~60)fps
- Dynamic GOP:
- Max Dynamic GOP: 1 (Slider: 0 to 255, Value: 30)
- Target Bitrate: 2 (Slider: 0 to 8000, Value: 4000)

Secondary Stream Settings:

- Codec: H.264
- Resolution: 1280x720
- Rate Control: CBR

Primary Stream

Codec

Configures the format of the video stream, the options are **H.265**, **H.264**, and **MJPEG**.

Resolution

Configures the resolution of the video stream. The available options are **1920x1080** and **1280x720**.

Rate Control

Configures the Rate Control mode as **CBR** (constant bit rate) or **CVBR** (constrained variable bit rate) for the stream. Selecting **CVBR** will show the setting options for **Smart GOP**.

Frame Rate

Adjusts the frame rate of the video stream, the range is 1~60FPS for NTSC Video System, and 1~50FPS for PAL Video System (refer to System Maintenance-Video System). The stream will be off if 0 is selected.

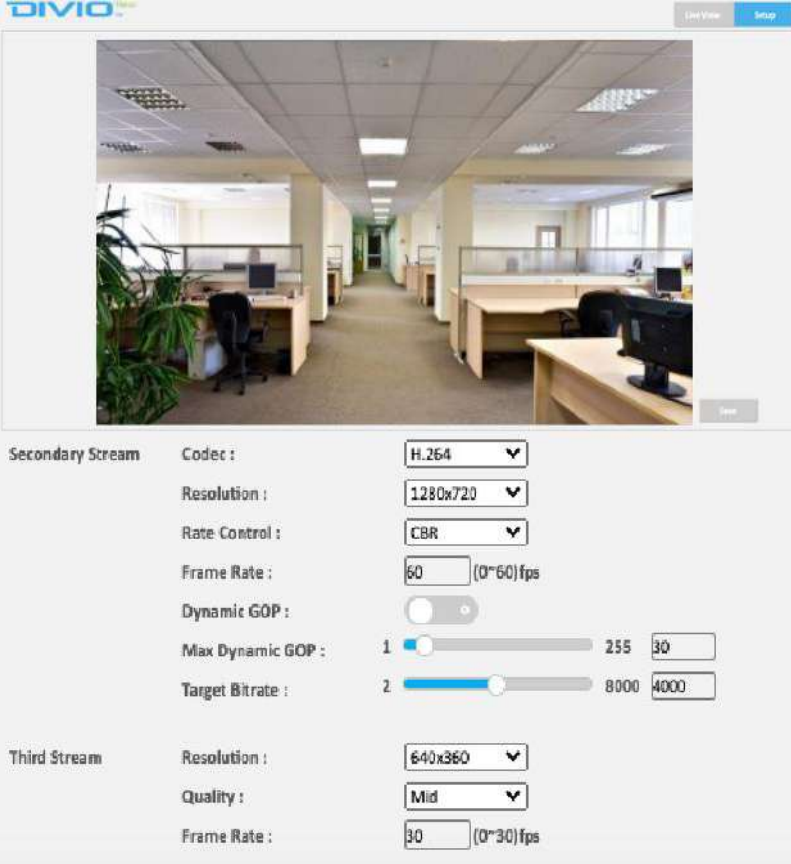

Max Dynamic GOP

Configures the GOP length of the stream, the range is 1~255. Users can enter the value or adjust it through the slider bar.

Dynamic GOP

Enables or disables Dynamic GOP feature. Enabling it will allow GOP to automatically increase when no moving objects are detected to save bandwidth. When moving objects are detected, GOP will automatically decrease.

Video Configuration Cont.

Secondary Stream

Codec : H.264

Resolution : 1280x720

Rate Control : CBR

Frame Rate : 60 (0~60) fps

Dynamic GOP :

Max Dynamic GOP : 1 255 30

Target Bitrate : 2 8000 4000

Third Stream

Resolution : 640x360

Quality : Mid

Frame Rate : 30 (0~30) fps

Target Bitrate

Configures the bit rate, the range is 2~8000. Users can enter the value or adjust it through the slider bar.

Secondary Stream

Codec

Configures the format of the video stream, the options are **H.265** and **H.264**.

Resolution

Configures the resolution of the video stream. The available options are **920x1080, 1280x720, 720x576, 720x480, 640x480, 640x360 and 320x240**.

Rate Control

Configures the Rate Control mode as **CBR** (constant bit rate) or **CVBR** (constrained variable bit rate) for the stream.

Frame Rate

Adjusts the frame rate of the video stream, the range is 1~60FPS for NTSC Video System, and 1~50FPS for PAL Video System (refer to System Maintenance-Video System). The stream will be off if 0 is selected.

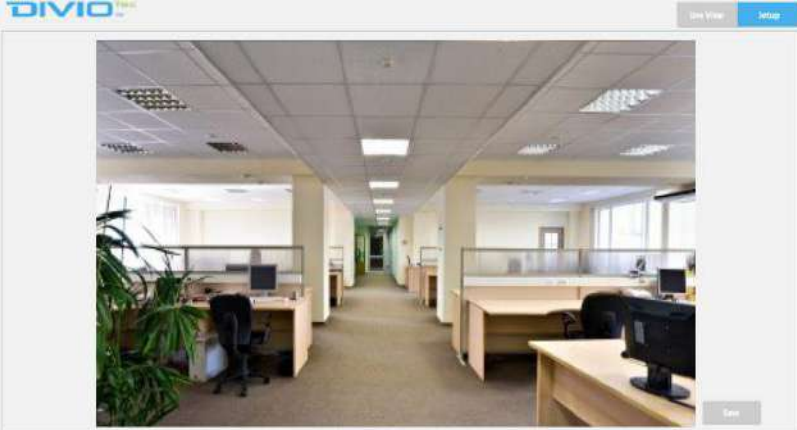

Max Dynamic GOP

Configures the GOP length of the stream, the range is 1~255. Users can enter the value or adjust it through the slider bar.

Target Bitrate

Configures the bit rate, the range is 2~8000. User can enter the value or adjust it through the slider bar.

Video Configuration Cont.

The screenshot shows the DIVIO camera configuration interface. At the top, there is a live video feed of an office hallway. Below the feed, the interface is divided into two sections: 'Secondary Stream' and 'Third Stream'.

Secondary Stream Configuration:

- Codec: H.264
- Resolution: 1280x720
- Rate Control: CBR
- Frame Rate: 60 (0~60)fps
- Dynamic GOP:
- Max Dynamic GOP: 1 255
- Target Bitrate: 2 8000

Third Stream Configuration:

- Resolution: 640x360
- Quality: Mid
- Frame Rate: 30 (0~30)fps

Third Stream

Resolution

Configures the resolution of the video stream. The available options are **640x360** and **320x240**.

Quality

Configures the video quality of the stream. The options are **High**, **Mid** and **Low**.

Frame Rate

Adjusts the frame rate of the video stream, the range is 0~30FPS. The stream will be off if **0** is selected.

Save

Save button to apply the configurations, click on this button once all the settings are confirmed for the new changes to take effect.

Video - Audio Configuration

Audio Settings

Type

Select the audio configuration type of the camera. The available options are **Line in** and **Line out**.

Encoding

Adjustment of audio compression. The available options are **A-Law** and **U-Law**.

Audio Input Level

Volume adjustment for audio-in of the camera. Configures the Audio Input level of the stream, the range is 0~32768. Users can enter the value or adjust it through the slider bar.

Audio Input Gain

Volume input quality adjustment for audio-in of the camera. Configures the Audio Input gain of the stream, the range is 0~21. Users can enter the value or adjust it through the slider bar.

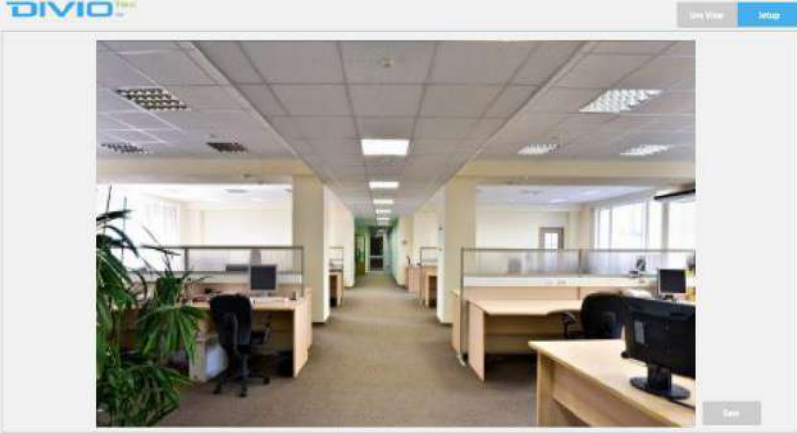

Audio Output Gain

Volume output quality adjustment for audio-out of the camera. Configures the Audio Output gain of the stream, the range is -10~10. Users can enter the value or adjust it through the slider bar.

Audio Output Play Clip

Select the Play Clip type of the audio. The available options are **Audio 1**, **Audio 2**, and **Audio 3**.

Image - Exposure

The screenshot shows the DIVIO camera configuration interface. At the top, there is a live video feed of an office hallway. Below the video feed, the 'Exposure' configuration panel is visible. The panel includes a 'Configurations' section with the following settings:

- Profile: Day
- AE Mode: Auto
- Iris control: 100%
- Adjustment: 50 (slider bar from 0 to 100)
- Exposure Time Control: 1/30
- Maximum Exposure Time: 1/30
- Minimum Exposure Time: 1/7500
- Exposure Time: 1/30

Configurations

Profile

The available options are **Day**, and **Night**.

AE Mode

The available options are **Auto**, **50Hz**, **60Hz** and **Lock**.

If **Lock** is selected, then Exposure Time Control, Gain Control and BLC cannot be edited. Only Exposure Time can be edited (the range is 1/3~1/71428).

Iris Control

The available options are **Auto**, **0%~100%** in increments of 10%.

Adjustment

Adjusts the weighting from 0~100. Users can enter the value or adjust it through the slider bar.

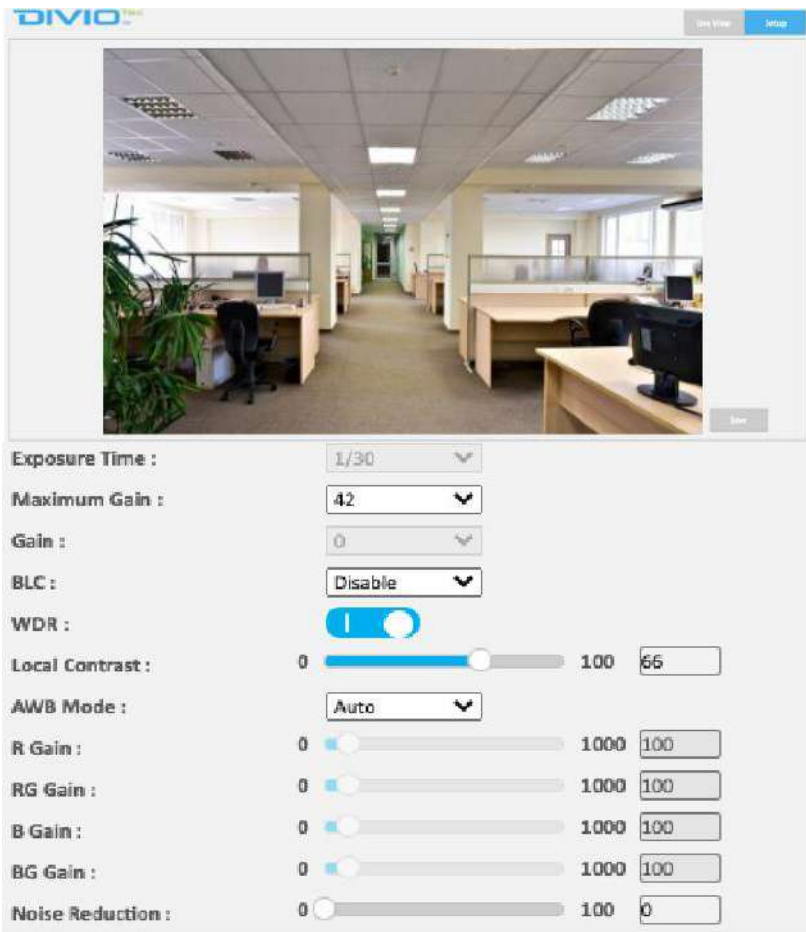

Exposure Time Control

The available options are **OFF**, **1/30**, **1/15** and **1/7.5**.

Exposure Time

The range is 1/3~1/71428. It can only be edited when **Lock** is selected as the AE Mode.

Exposure Cont.

The screenshot displays the DIVIO camera configuration interface. At the top, there is a live video feed showing an office hallway. Below the feed, the control panel includes the following settings:

- Exposure Time: 1/30
- Maximum Gain: 42
- Gain: 0
- BLC: Disable
- WDR: Enabled (indicated by a blue slider)
- Local Contrast: 66 (slider bar from 0 to 100)
- AWB Mode: Auto
- R Gain: 100 (slider bar from 0 to 1000)
- RG Gain: 100 (slider bar from 0 to 1000)
- B Gain: 100 (slider bar from 0 to 1000)
- BG Gain: 100 (slider bar from 0 to 1000)
- Noise Reduction: 0 (slider bar from 0 to 100)

Maximum Gain

Select the value of Maximum Gain with the range is 0~42 with the increment of 3.

Gain

Select the value of Gain with the range is 0~42 with the increment of 3. It can only be edited when Lock is selected as the AE Mode.

BLC

Enable this function if the camera is exposed to bright backlight, in images where a bright light source is behind the subject of interest. The available options are **Enable**, and **Disable**.

WDR

Enable this function if the camera is exposed to bright backlight, glare or high contrast lighting.

Local Contrast

Adjusts the contrast level from 0~100. Users can enter the value or adjust it through the slider bar.

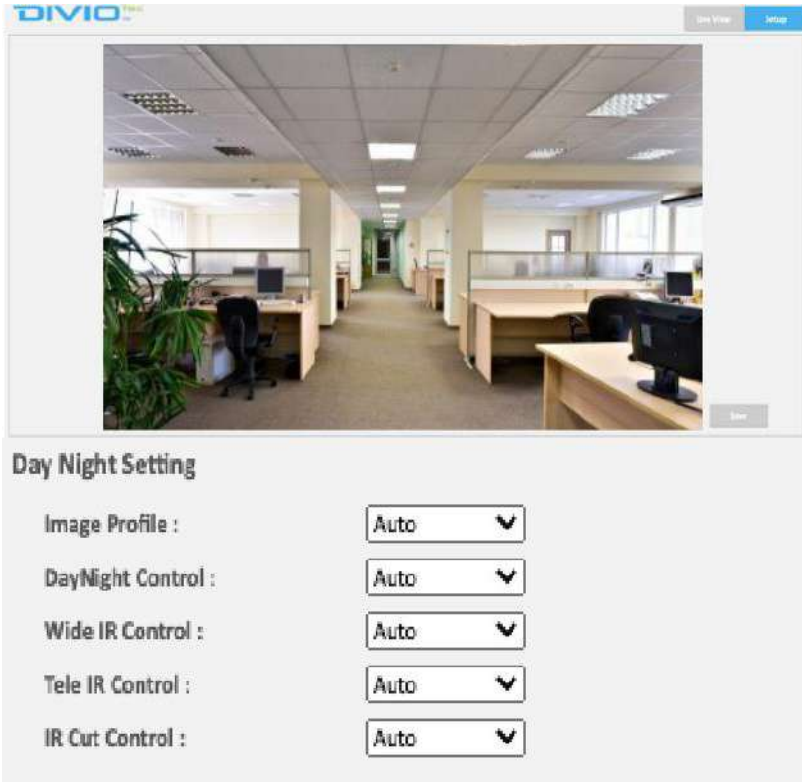

AWB Mode (Auto White Balance Mode)

White balance allows the camera to produce more accurate colors under different lighting conditions. The **Auto** setting is **Auto White Balance**, which automatically adjusts the white balance to suit the current lighting condition. You can also adjust the white balance manually through **R Gain**, **RG Gain**, **B Gain**, or **BG Gain**. The range is 0 ~1000.

Noise Reduction

Adjust the Noise Reduction from 0~100. Users can enter the value or adjust it through the slider bar.

Exposure Cont.

The screenshot displays the DIVIO camera configuration interface. At the top left is the 'DIVIO' logo. The main area features a live video feed of an office hallway with desks, computers, and office chairs. In the top right corner of the interface, there are 'Live View' and 'Setup' buttons. Below the video feed, the 'Day Night Setting' configuration panel is visible, containing five dropdown menus, all of which are currently set to 'Auto'.

Day Night Setting

Image Profile :	Auto	▼
DayNight Control :	Auto	▼
Wide IR Control :	Auto	▼
Tele IR Control :	Auto	▼
IR Cut Control :	Auto	▼

Day Night Setting Image Profile

Select the Image Profile mode. The available options are **Auto**, **Force Day**, and **Force Night**.

Day Night Control

Select the Day and Night control mode. The available options are **Auto**, **Force Day**, **Force Night**, **Schedule**, and **Light Sensor**.

Wide IR Control

Select the IR control mode to use. The available options are **Auto**, **High**, **Mid**, **Low** and **OFF**.

Tele IR Control

Select the IR control mode to use. The available options are **Auto**, **High**, **Mid**, **Low** and **OFF**.

IR Cut Control

Select the IR cut control mode to use. The available options are **Auto**, **Force Day** and **Force Night**.

Save

Save button to apply the configurations, click on this button once all the settings are confirmed for the new changes to take effect.

Profile Management

Adjusts multiple customized settings in one camera for different times.

Profile

Select the Profile mode. The available options are **profile1**, **profile2**, **profile3**, **profile4**, **profile5**, **profile6**, **profile7**, **profile8**, **profile9**, and **profile10**.

Profile Schedule

Select a Profile to schedule with. The available options are **profile1**, **profile2**, **profile3**, **profile4**, **profile5**, **profile6**, **profile7**, **profile8**, **profile9**, and **profile10**.

S

Press **S** for a particular weekday to set up a 24-hour schedule automatically.

Configure the scheduled time by holding down the mouse button and clicking the time block to enable the schedule settings on the selected time.

Profile Rename

Rename the Profile of your choice. Click the(save) button for the rename to take effect.

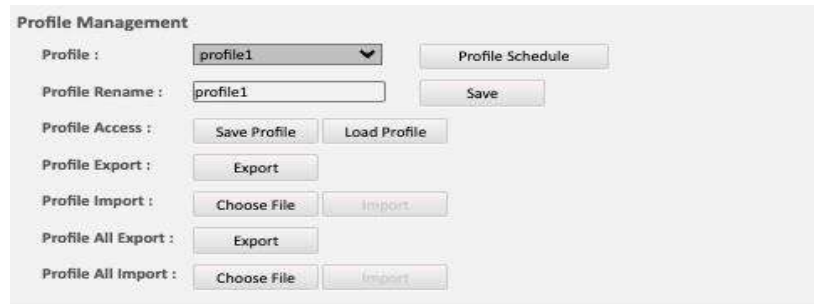

Profile Access

Select the **Save Profile** to save current exposure settings to profile of the users choices. Select the **Load Profile** to load selected profile of the users choices.

Profile Export/ All Export

Select the **Export** button to export the Profile Data of your choice/ all of the profiles.

Exposure Cont.

The screenshot displays the 'Profile Management' interface with the following elements:

- Profile :** A dropdown menu showing 'profile1' and a 'Profile Schedule' button.
- Profile Rename :** A text input field containing 'profile1' and a 'Save' button.
- Profile Access :** Two buttons: 'Save Profile' and 'Load Profile'.
- Profile Export :** A button labeled 'Export'.
- Profile Import :** Two buttons: 'Choose File' and 'Import'.
- Profile All Export :** A button labeled 'Export'.
- Profile All Import :** Two buttons: 'Choose File' and 'Import'.

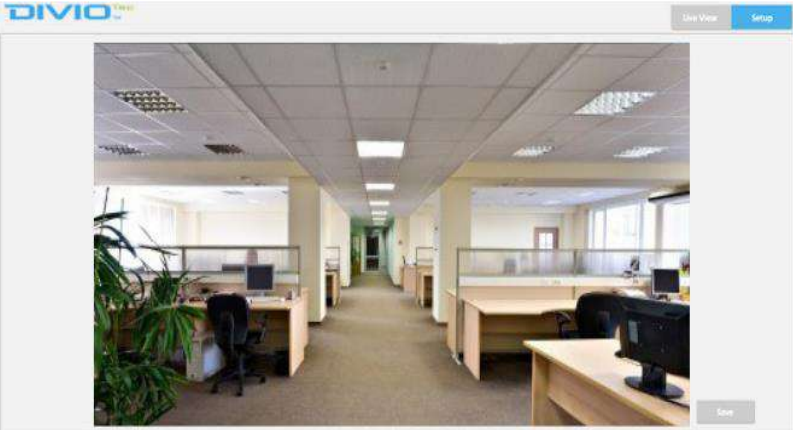

Profile Import/ All Import

Select the **Import** button to import the Profile Data of your choice/ all of the profiles.

Save

Save button to apply the configurations, click on this button once all the settings are confirmed for the new changes to take effect.

Image - Basic Settings

The screenshot shows the DIVIO camera configuration interface. At the top left is the DIVIO logo. To the right of the logo are 'Live View' and 'Setup' buttons. The main area is a live video feed of an office hallway. Below the video feed is a 'Basic Settings' section. Under 'Orientation', there is a 'Mirror' toggle switch (currently off) and a 'Rotate' dropdown menu with options 0, 90, 180, and 270. Under 'Digital Processing', there is a 'Stabilize' toggle switch (currently off) and five sliders for 'Sharpness Adjust', 'Saturation Adjust', 'Contrast Adjust', 'Brightness Adjust', and 'Hue Adjust'. Each slider has a range from 0 to 100 and a numerical input field set to 50.

Orientation

Mirror

Enables or Disables the mirror function on the camera.

Rotate

Allows you to rotate the image from the camera. The available options to rotate the image are **0, 90, 180, and 270**.

Digital Processing

Stabilize

Enables or disables video stabilization function. Enabling it will allow the camera to minimize the shakiness seen on the video stream (such as vibrations caused by strong winds or earthquakes).

Sharpness Adjust

Configures the sharpness of the image, the range is 0 ~ 100, with 0 being the lowest sharpness. Enter the values or adjust the bar to increase or decrease the values. The default value is 50.

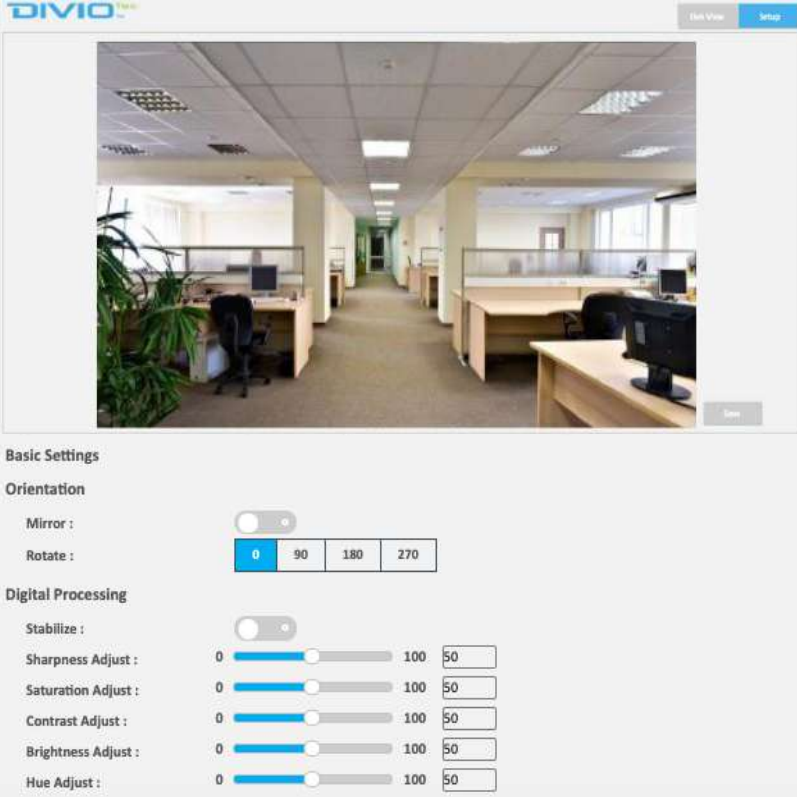

Saturation Adjust

Configures the color saturation of the image, the range is 0 ~ 100, with 0 being the lowest saturation. Enter the values or adjust the bar to increase or decrease the values. The default value is 50.

Contrast Adjust

Configures the contrast of the image, the range is 0 ~ 100, with 0 being the lowest contrast. Enter the values or adjust the bar to increase or decrease the values. The default value is 50.

Basic Settings Cont.

The screenshot shows the DIVIO camera configuration interface. At the top, there is a live video feed of an office hallway. Below the video feed, the settings panel is visible, categorized into 'Basic Settings' and 'Digital Processing'.

Basic Settings

Orientation

Mirror :

Rotate : 0 90 180 270

Digital Processing

Stabilize :

Sharpness Adjust : 0 100 50

Saturation Adjust : 0 100 50

Contrast Adjust : 0 100 50

Brightness Adjust : 0 100 50

Hue Adjust : 0 100 50

Brightness Adjust

Configures the brightness of the image, the range is 0 ~ 100, with 0 being the lowest brightness. Enter the values or adjust the bar to increase or decrease the values. The default value is 50.

Hue Adjust

Configures the overall hue of the image, the range is 0 ~ 100. Increasing the value will adjust the image hue towards red. Decreasing the value will adjust the image hue towards blue. The default value is 50.

Restore Settings to Defaults

Discards all the settings applied to the image and reset to the default settings.

Default All Image Settings

Discards all the settings applied to the image and revert to the previous settings.

Image - ROI

ROI

Configurations

Stream :

ROI Zone 1 :

ROI Zone 2 :

ROI Zone 3 :

ROI Zone 4 :

ROI Zone 5 :

Configurations

ROI is used to select which areas will be monitored and recorded with higher image quality while using lower image quality for other non-ROI zones to save bandwidth and storage. The instructions below illustrate how to setup ROI.

1. Select Stream 1 or Stream 2 to set the ROI on.
2. There are 5 ROI zones that can be configured (zone 1 ~ zone 5). Switch to **ON** to enable ROI function. The default is **OFF**.
3. Set the image quality of the ROI in the **Level** drop-down menu, the options are **Low**, **Medium** or **High**.
4. Select the area to set the ROI by holding down the mouse button and drag to make a rectangular square, release the button once the desired area is covered.
5. Press the **Set Area** button for the setting to take effect. The ROI area will then be seen on the video stream.
6. Press the **Del Area** button or select **OFF** to delete the ROI area.

Image - Privacy Zone

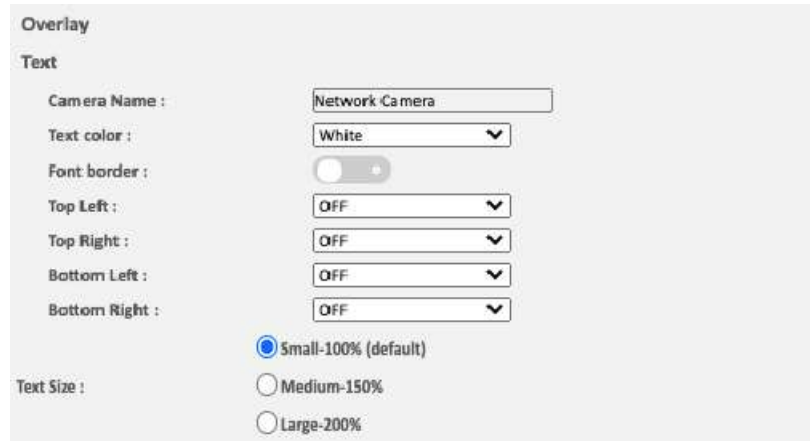

Configurations

Configures which area of the video stream will be masked for privacy. There are 5 privacy zones that can be configured.

1. Select **ON** to enable **Privacy Zone** function. The default is **OFF**.
2. Select the area to set the privacy zone by holding down the mouse button and drag to make a rectangular square, release the button once the desired area is covered.
3. Press the **Set Area** button for the setting to take effect. The masked area will be filled with black and the label **Mask** will be seen on the video stream.
4. Press the **Del Area** button or select **OFF** to delete the privacy zone.

Image - Overlay

The screenshot shows the 'Overlay' configuration page. Under the 'Text' section, there are several settings:

- Camera Name :** A text input field containing 'Network Camera'.
- Text color :** A dropdown menu set to 'White'.
- Font border :** A toggle switch that is currently turned off.
- Top Left :** A dropdown menu set to 'OFF'.
- Top Right :** A dropdown menu set to 'OFF'.
- Bottom Left :** A dropdown menu set to 'OFF'.
- Bottom Right :** A dropdown menu set to 'OFF'.

Below these settings is the **Text Size :** section with three radio button options: **Small-100% (default)** (which is selected), **Medium-150%**, and **Large-200%**.

Overlay

Camera Name

Specifies a name for the device. The maximum length is 32 characters.

Text Color

Configures the text colour as **White**, **Black**, **Green**, **Yellow**, or **Red**.

Font Border

Enables or Disables the Font Border function.

Content

OFF: The default setting is OFF.

Date/Time: Displays the current date/time.

Camera Name: Displays the device name.

Camera Name + Date/Time: Displays the device name and date/time.

Custom Text: A customized text can be specified here.

There are 4 content positions (Top Left, Top Right, Bottom Left and Bottom Right) to display the camera name, current date/time and text overlay.

Text Size

There are three available options of the Text Size. The available options are **Small-100%(default)**, **Medium-150%**, or **Large-200%**.

Save

Save button to apply the configurations, click on this button once all the

DHCP

Enables or disables DHCP, use this feature if the camera is connected to a network with DHCP server.

To manually configure an IP address, disable DHCP and input the IP address, subnet mask, default gateway, primary and secondary DNS server address.

System Settings

HTTP Port

Configures the HTTP port number of the web configuration menu.

HTTPS Port

Configures the HTTPS port number of the web configuration menu.

Hardware Address

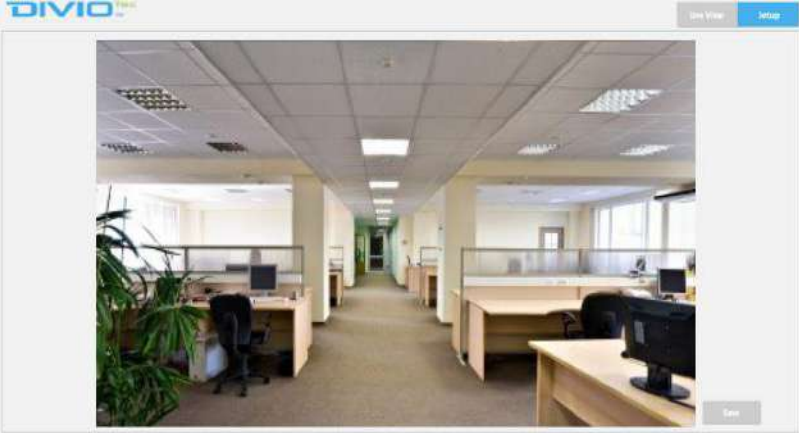

Unique MAC address for each camera device.

IPv6 Settings

Enables or disables IPv6 function.

To manually input an IP address, enable IPv6 and input the address prefix, default route, enable/disable router advertisement and DNS server address.

Basic Cont.

The screenshot shows the DIVIO camera configuration interface. At the top left is the DIVIO logo. To the right of the logo are two buttons: 'Live View' and 'Setup'. The main area is a large video feed showing an office hallway with desks, computers, and office chairs. Below the video feed, there are two sections: 'RTMP Settings' and 'Link Speed'. In the 'RTMP Settings' section, there is a label 'RTMP :' followed by a toggle switch that is currently turned off. Below that is a label 'Url :' followed by an empty text input field. In the 'Link Speed' section, there is a label 'Speed and Duplex :' followed by a dropdown menu that currently shows 'Auto'.

RTMP Settings

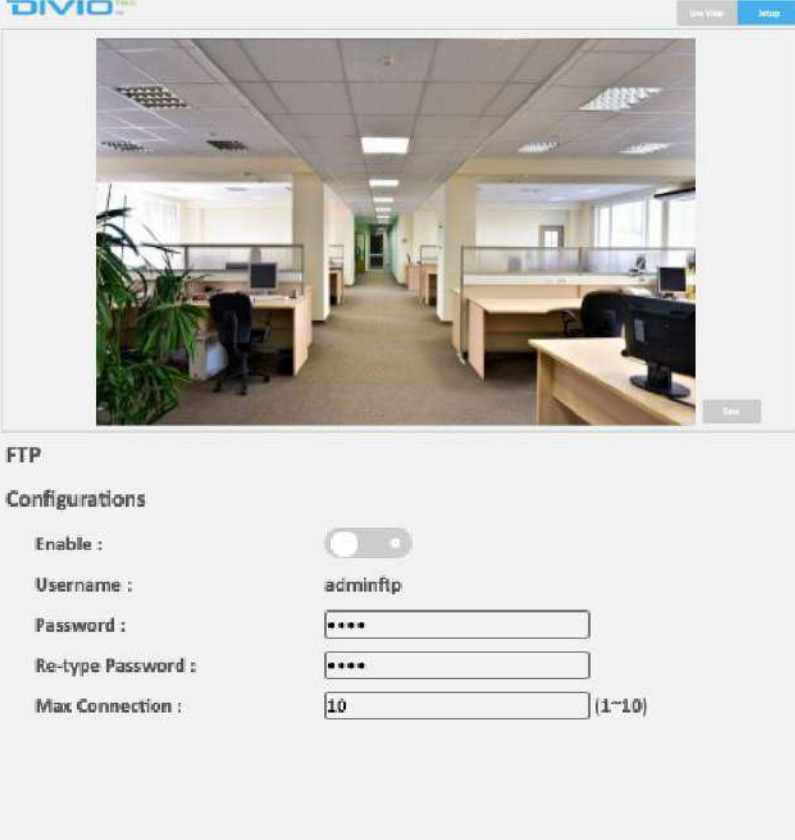

Enables or disables RTMP function. Enter website link if necessary.

Link Speed

Speed and Duplex

The available options are **Auto**, **100Mbps Full Duplex**, **100Mbps Half Duplex**, **10Mbps Full Duplex**, or **10Mbps Half Duplex**.

Network - FTP

The screenshot shows the DIVIO camera configuration interface. At the top, there is a live video feed of an office interior. Below the video feed, the 'FTP' configuration section is visible. It includes a 'Configurations' header and several settings: 'Enable' (a toggle switch), 'Username' (adminftp), 'Password' (masked with dots), 'Re-type Password' (masked with dots), and 'Max Connection' (10, with a range of 1~10 in parentheses). There are 'Live View' and 'Setup' buttons at the top right of the interface, and a 'Save' button at the bottom right of the video feed area.

Configurations

Enable

Enables or disables FTP access to this camera. This function is only available when an SD card is inserted. You can access files in the SD card attached to the IP camera.

Password

Specifies the FTP login password to access the IP camera.

Max Connection

Specifies the maximum number of FTP connections the IP camera can support.

Save

Save button to apply the configurations, click on this button once all the settings are confirmed for the new changes to take effect.

Network - SSL

The screenshot shows a web configuration page for SSL. At the top, it says "SSL" and "SSL Configuration". Under "Mode :", there are three radio buttons: "Disabled" (which is selected), "Required", and "Optional". Below the radio buttons is a "Save" button. Under "Certificate", it says "Certificate : No certificate has been installed.". Below that is a section titled "Select Certificate Install Method" with three radio buttons: "Self-Signed Certificate", "Certificate Request", and "Upload Certificate". At the bottom right of the form is a "Next" button.

SSL Configurations

Mode

Disabled: Support for http only.

Optional: Support for http & https.

Required: Support for https only.

Certificate

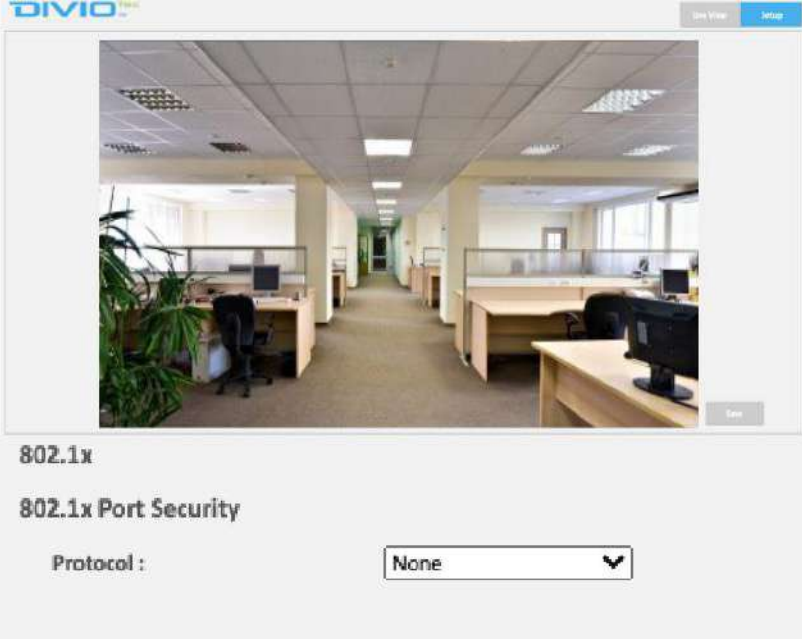

Select Certificate Install Method

Provides options to install a new CA certification.

Save

Save button to apply the configurations, click on this button once all the settings are confirmed for the new changes to take effect.

Network - 802.1x

The screenshot shows the DIVIO camera configuration interface. At the top left is the DIVIO logo. Below it is a large video feed showing an office hallway with desks and computers. In the top right corner of the interface, there are buttons for 'Live View' and 'Setup'. Below the video feed, the text '802.1x' is displayed. Underneath that, the section '802.1x Port Security' is visible. A label 'Protocol :' is followed by a dropdown menu currently set to 'None' with a downward arrow icon. A 'Save' button is located in the bottom right corner of the configuration area.

802.1x Configurations

Protocol

The default is **None** to disable 802.1x function. Select the protocols to enable 802.1x function. The available protocols are **EAP-MD5**, **EAP-TLS**, **EAP-TTLS** or **EAP-PEAP**.

After the protocol has been selected, manually configure the username, password and other required information.

Save

Save button to apply the configurations, click on this button once all the settings are confirmed for the new changes to take effect.

D/N Auto Focus Calibration :

NOTE: It will take time to focus during day/night switch.

Reset to Factory Default

Click this button to restore all the camera's setting back to factory default, including IP address (default is 192.168.1.168).

Download Log File

Records all the status information of the camera in list format when the camera is connecting to the PC. Downloads the log file to the computer as a text file.

Backup

Download Now

Downloads the current camera settings to a backup file.

Restore

Update and Restore

Click on the **Browse** button and locate the backup file, once the file is selected, press the **Update and Restore** button to restore camera settings.

Video System

Options to switch between NTSC or PAL video system. The camera will restart and reset to default after switching the video system.

D/N Auto Focus Calibration

Enables or disables auto focus calibration for day/night control.

System - User Management

The screenshot displays the 'User Management' interface. It is divided into three main sections: 'Admin Setting', 'User List', and 'User Information'.
1. **Admin Setting**: Contains three input fields: 'Admin' (pre-filled with 'Admin'), 'Password' (masked with four dots), and 'Re-type Password' (masked with four dots).
2. **User List**: Features a large empty rectangular box for displaying users. Below the box are two buttons: 'New User' and 'Delete User'.
3. **User Information**: Includes an 'Access Level' section with radio buttons for 'Admins' and 'Views'. Below this are three input fields for 'Username', 'Password', and 'Re-type Password'.

Admin Setting

Admin

The default username is **admin**. Users cannot change it.

Password

Set up the password for administrator's authorization.

Re-type Password

Retype the same password to confirm.

User List

Displays user accounts available on the camera.

Press **New User** to add a new account and set up the authorization level of this user from the following **User Information**. Press **Give Up** to delete the new user if you do not want to set up continually.

To delete an account, press the **Delete User** button.

User Management Cont.

The screenshot displays the 'User Management' interface. It is divided into three main sections: 'Admin Setting', 'User List', and 'User Information'.
1. **Admin Setting**: Contains three input fields: 'Admin' (with the value 'Admin'), 'Password' (with four asterisks), and 'Re-type Password' (with four asterisks).
2. **User List**: Features a large empty rectangular box for displaying users. Below the box are two buttons: 'New User' and 'Delete User'.
3. **User Information**: Includes an 'Access Level' section with two radio buttons, 'Admins' and 'Views'. Below this are three input fields for 'Username', 'Password', and 'Re-type Password'.

User Information

This section allows users to set up each new user's authorization level. A total of ten accounts can be created for **Admins/Views**.

Access Level

Admins: Has full control (read/write) over every configuration menu item.
Views: Only has access (read) to the live view of the camera (main screen).

User Name

Username must be at least 1 and up to 16 characters.

Password

Password must be at least 1 and up to 16 characters.

Re-type Password

Retype the same password to confirm.

Save

Save button to apply the configurations, click on this button once all the settings are confirmed for the new changes to take effect.

This section configures the network storage server address that the camera will use when an event trigger is detected.

Trigger Event

Configures which type of event trigger to enable and the network storage server that the camera will connect to. The options are:

- Enable Trigger Alarm Detection
- Enable Trigger Motion Detection
- Enable Trigger Tampering Detection
- Enable Object Detection
- Enable Audio Detection
- Enable Trigger Scheduled

Receipient List

Network Storage Status

Displays the current connection status with the network storage server. (**not_mounted** or **ok**)

Network Address

Specifies the IP address of the network storage server.

Share

Specifies the shared folder name on the network storage server.

Record Type

Specifies the event trigger action. The options are **Snapshot** and **Video**.

Mount And Remove Network Storage

Login Certificate

Username and Password

Specifies the login username and password for the network storage server.

Mount and Remove Network Storage

Mount

Set up a network connection with the network storage server. All the video recordings or snapshots from event triggers will be uploaded to the network storage server. After the setting is complete, the **Network Storage Status** field will display **ok**.

Remove

Delete the previous setting or set up a new one. After the setting is removed, the **Network Storage Status** field will display **not_mounted**.

Save

Save button to apply the configurations, click on this button once all the settings are confirmed for the new changes to take effect.

Relay Handler Configurations

This section configures the event trigger options for devices connected to the DI/DO of the camera.

Modes

The available options are **Monostable**, or **Bistable**.

Trigger Alarm Detection: When a signal is detected from Alarm in, the Alarm out will be triggered.

Trigger Motion Detection: When a motion detection event is detected, the Alarm out will be triggered.

Trigger Tampering Detection: When a tampering alarm event is detected, the Alarm out will be triggered.

Trigger Object Detection: When an object detection event is detected, the Alarm out will be triggered.

Trigger Audio Detection: When an audio detection event is detected, the Alarm out will be triggered.

Types

The options are **N.O.** and **N.C.**

Off Times

Configure the seconds from 0 to 30 seconds.

Event - SD Record Handler

SD Record Handler Configurations

Configures which type of event trigger to enable the SD recording and scheduling function. The following options are available:

- Enable Trigger Alarm Detection
- Enable Trigger Motion Detection
- Enable Trigger Tampering Detection
- Enable Trigger Object Detection
- Enable Trigger Audio Detection
- Enable Trigger Network Loss Detection
- Enable Trigger Scheduled

Available

If an SD card is installed, this section will display information on the availability of the SD card.

Usage

If an SD card is installed, this section will display the percentage of the total storage used.

Format SD Card

Formats the SD card, all data stored on the SD card will be erased if this option is used.

Status

Displays whether an SD card is installed or not. If an SD card is detected, ok will be displayed; if an SD card is not detected (or a faulty SD card is used), not_mounted will be displayed.

Object Schedule

Zone Intrusion: Detects objects that move into a user specified area. Detect mode options that available are Inside or Outside.

Loitering: Detects objects that remain in a user-specified area beyond a specified time.

Left click and drag to set a specified area. Right click and drag to erase a specified area. The range of sensitivity is 0~100.

Loitering time is the amount of time an object must be in the area to trigger the event. The minimum loitering time range is 1~100(sec).

Wrong way: Continuously monitors a specified area to detect objects that is going on the wrong way. The range of sensitivity is 0~100.

Object Detection Cont.

The image shows two identical configuration panels for object detection. Each panel has a title 'Object Detection', two instructional lines, a 'Configurations' section, and an 'Object Schedule' button.

Object Detection
*Left click and drag to set a specified area.
*Right click and drag to erase a specified area.

Object Schedule Settings

S

Press **S** for a particular weekday to set up a 24-hour schedule automatically.

D

Press **D** for a particular weekday to clear all the previous scheduled settings automatically.

Configure the scheduled time by holding down the mouse button and clicking the time block to enable the schedule settings on the selected time. A light blue color on the time block indicates that the alarm schedule is enabled, while a light grey color indicates that the alarm schedule is disabled.

Alternatively, you can manually enter numbers to configure the hours and minutes from start to end for all weekdays.

Save

Save button to apply the configurations, click on this button once all the settings are confirmed for the new changes to take effect.

Close

Press to leave this schedule setting page.
