

Crystal Clear Image for 365 Days with Rain-Wash Coating!

Featuring rain-wash coating technology, DivioTec provides excellent visibility that ensures high video quality even when the camera is installed in a humid environment with frequent rain showers. Please click on the following picture for the testing video.

By employing new hydrophobic technology, DivioTec's rain-wash coating is capable of preventing water from attaching to the surface of cameras specially designed for outdoor environments such as parks, parking lots, harbors, etc. In addition, any dirt or dust attached to the cover would be washed away during rainfall or other exposure to water without leaving any water stains or droplets on the cover surfaces.

Why NDR352P is a must-have for outdoor applications:

- Self-cleaning: allows water to flow over the cover without water stains
- Hard coated cover: prevents the dome cover from being scratched
- Extreme-weather resistant: from -40°C to 80°C (-40°F to 176°F)*, IP67 certified
- Anti-corrosion powder coating, ideal for applications near the seashore
- IK10 vandal resistant

*DivioTec offers 3 year warranty when the operating temperature of NDR352P is from -40°C to 60°C (-40°F to 140°F). For the 2 hour test up to 80°C/176°F, please click [here](#) for the video.
